Table 1: **Exact geometry helps frontier models but leaves residual errors.** Each model uses 210 matched structures and complete reference geometry as text. Counts show cases corrected (+) or newly wrong (−) with text. Closed is $100(R_3 - R_4)/(1 - R_4)$ relative to $R_1 = 1$, using unrounded counts. Frontier models use native API defaults; the original roster uses temperature 0.7. Fable has four text cases with only refusals, counted incorrect. Correction opportunities vary with image-baseline error.

	Accuracy (%)		Paired counts		Closed
